

Reducing Cyber Risk Through Data Driven Decisions

Cyber threats are constantly evolving -- growing smarter and more sophisticated. Whether you're concerned about a nation-state, hacktivist, organized criminal, or a non-malicious insider – these attacks can take just minutes, if not seconds, to compromise your company. To change the status quo, enterprises need to prioritize IT security with an evidence-based approach to making data driven decisions.

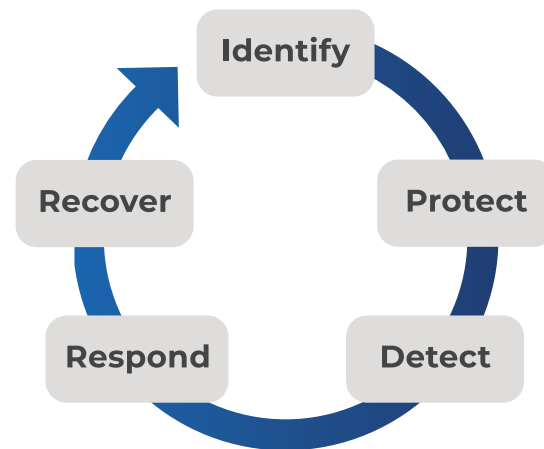

As technology advances, so do threats to security, and enterprises need to be steadfast in protecting their data. [Click here](#) to contact us and learn how CDI Security Solutions can help your organization protect assets and prevent breaches.

Our Approach

We believe that security has to be incorporated into the very fabric of an organization, and as such we need to constantly challenge our customers to prepare themselves for the latest threats and regulatory requirements thrust upon them. Our portfolio covers the entire technology management lifecycle designed to meet an organization's unique and specific needs.

CDI Security Solutions is empowering our customers with knowledge (i.e. data) to make informed decisions on the sort of priorities and investments that complement their business risk appetite.

Specific tasks:

- Strategy and architecture: help clients assess their existing security posture and attack surface while delivering a pragmatic approach towards remediation
- Procure tools and services
- Aggregation, orchestration and implementation of tools and data to help optimize your security stack and threat hunting capabilities
- End-to-end remediation of incidents before they become business disrupting
